LESS IS BEST

Sound product. Sound body. Sound mind.
No compromise.

Adding to your unique talent, physique, skill set,
potential. Act vs. React.

Performance Within.

BUILT TO BE A PART OF YOU

By building it from the inside out the equipment
becomes a part of you, enhancing your potential.
Allowing your instincts to explode on the ice.

It's you, only better.

YOUR FEET JUST GOT FASTER.

U FOAM: BUILT TO BE A PART OF YOU

U Foam technology powers CCM skates and provides the only true custom fit on the market. U+ skates start with the player's foot and when heated take the foot's unique shape. Our competition starts out with a preset shape and forces the player's foot to fit into them.

A skate that fuses to each unique foot provides instant response and a better energy transfer.

1 ANKLE

The one-piece construction and strength of U Foam allows the skate to form to the ankle without any limitations. Unlike our competition, there are no additional ankle counters or existing shapes. The end result is an ankle shape determined by the player's unique ankle positioning and shape. Added soft foams improve step-in comfort.

2 HEEL

U Foam coupled with a new heel pocket construction, allow the heel to lock into place. When heated, this construction allows the player to create their own heel pocket to lock the heel in place. This is very different from our competition who force every heel into one preset shape.

3 FOREFOOT

When heated the U Foam gets very soft and fuses to the player's unique foot. By fitting so close to the foot, the result is instant reaction leading to better agility and a more powerful push off. U Foam makes up for any abnormalities versus the perfect foot and cools down in the shape of the unique foot.

- **STRONGER** than any core construction we have ever used for maximum energy transfer and push off.
- Extremely **REACTIVE** when heat molded, it molds to your foot as one piece for a truly customized fit. The end result is direct response and agility.
- **LIGHTWEIGHT** for greatly increased foot speed and acceleration

U+ TECHNOLOGY SPECIFICALLY DESIGNED TO INCREASE YOUR SPEED IN THE CREASE.

U Foam technology powers CCM skates and provides the only true custom fit on the market. U+ skates start with the player's foot and when heated take the foot's unique shape. A skate that fuses to each unique foot provides instant reaction by improving energy transfer. U Foam allows you to dominate the crease.

1 LIGHTWEIGHT

The first sub 900 gram goalie skate.

- Quicker feet help you to fly across the crease
- Reduced fatigue keeps you fast all game long

2 CUSTOMIZATION

U+ skates start with the player's foot and when heated take the foot's unique shape.

- Instant Reaction to stay square to the play

3 STRENGTH/SUPPORT

U Foam provides additional support for a stronger push off to get across the crease quicker. New higher boot construction provides added support without inhibiting flexibility.

RRCCM

YOUR FEET JUST GOT LIGHTER.

EXPLOSIVE ACCELERATION, FASTER TOP END SPEED AND TIGHTER TURNS

THE SCIENCE. The patent pending rocketrunner reduces weight where it matters most, in the blade. The same precision stainless steel feel that pro players demand, simply 33% lighter than any other CCM

blade. A lighter blade raises the center of gravity, optimizing the balance of the skate, making it easier to maneuver. For full details and video, please visit ccmsports.com/rocketrunner

WWW.CCMSPORTS.COM

CRAZY LIGHT.
UNBELIEVABLE VELOCITY.

1 TAPER

U+ Sticks are built from the inside out, therefore there is no blade insertion into the shaft. Instead, the blade is molded over both sides of the shaft, making it a true one-piece stick. The 24" true taper transfers all the energy from your hands directly to the blade and allows for maximum stick load.

2 CONSTRUCTION

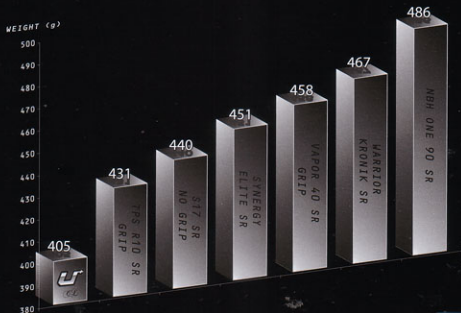

CCM uses ultra-low aerial unidirectional super light carbon fibers in the shaft to reduce the weight to 405 grams. This super light stick offers more feel, better balance, quicker reaction time, faster swing speed and ultimately, super fast shots resulting in more goals.

3 BLADE

There is 100% pre-preg thin lightweight carbon micro-fibers feathered ply orientated in the blade, in other words, there are multiple layers of high-grade carbon placed at different angles in the blade. This results in a lighter blade with the same durability.

4 SHAFT

The U+ CL stick features a 360° inter-laced full carbon woven wrap outside layer, which provides the best durability a stick in this weight category can have.

CCM
performance within

1

2

3

OCTO GUN

1 TOP SHAFT

First 36" of the shaft features a Traditional 'T' geometry.

2 LOWER SHAFT

The lower part of the stick features a 24" 8-sided Octo Gun power taper. This shape allows for improved vertical stiffness, thus resulting in a faster shot, as well as better accuracy and more stability.

3 TAPER

The 8-sided power taper also eliminates mass for a lighter weight stick with better balance and more feel. The Octo Gun 50 is 40 grams lighter than last year's CCM V10.

YOUR DEKES AND DANGLES
JUST BECAME SECOND NATURE.

**1 3-PIECE
THUMB**

Molded protection articulates on two angled axis to map the thumb's natural curve around a stick.

2 BACKHAND

Anatomically positioned to protect the hand and fingers without restricting movement.

EPP die cut pieces provide pro level protection without weighing you down.

Pro suggested tapering at side of glove for a fit that hugs your hand.

3 CUFF

Short molded cuff roll allows for maximum mobility.

Extended flexible cuff moves with your wrist while protecting from slashes.

PERFORMANCE

The CCM Vector 10 glove is built to withstand slapshots and slashes while hugging your hand for a perfect fit so dazzling stickhandling becomes second nature.

PREPARE YOUR BRAIN FOR
A SECOND SKULL.

PRO APPROVED TO PASS THE MIRROR TEST.

1 SHELL

Ergonomic, aerodynamic shell design with the industry's widest field of vision.

2 EPP

EPP liner for multiple impact protection.

3 MEMORY FOAM

Heat activated memory foam for comfort.

4 TOOL-FREE

Lift and lock tool-free adjustment.

5 VENTING

Extensive venting for maximum air flow.
