ALWAYS THINKING

SOMETIMES OBSESSION IS A BAD THING. LIKE CAMPING OUTSIDE YOUR EX-GIRLFRIEND'S IN A TENT.

BUT OBSESSION DOESN'T ALWAYS HAVE TO BE ~~SCARY~~ CREEPY. SOMETIMES IT CAN BE CHanneLED INTO SOMETHING BENEFICIAL TO THE WORLD. LIKE THE WAY WE OBSESS OVER BETTERING OUR TECHNOLOGY.

WE WAKE UP IN THE MIDDLE OF THE NIGHT TO JOT DOWN IDEAS. WE SKETCH THEM OUT ONTO BAR NAPKINS.

WHEN WE DON'T HAVE PAPER, ~~WE~~ DRAW ON OUR HANDS. POINT IS, WE ARE ALWAYS THINKING OF HOW OUR PRODUCT CAN IMPROVE. IT'S WHAT DRIVES US. AND WE DON'T PLAN ON STOPPING.

~~EVER~~ EVER.

DAGGER TAPER FLEX TECHNOLOGY

TRADITIONAL STICK FLEX

DAGGER TECHNOLOGY

Dagger Taper Technology keeps the hand area stiffer and allows the stick to flex lower in the shaft and blade area as well as in the upper handle. This loads and releases the shaft and blade together for more flex and better pop on slap shots, snap shots and wrist shots.

- Max Flex Region
- Stiff Region
- Stiffest Point

DAUER X60

EASTON S19

DAGGER TECHNOLOGY

WIDOW & Diablo STICK TECHNOLOGY

Competitor sticks flex more in the middle-to-lower region of the shaft. This allows the lower hand to push through the shaft instead of flex the stick. Using precision flex gauge equipment, Warrior was able to map out flex points for each model stick versus the Widow and Diablo using Dagger Taper Technology.

- Soft/Flexible Region
- Stiff Region
- Stiffest Point

WIDOW & Diablo

STICK TECHNOLOGY

DAGGER TAPER TECHNOLOGY

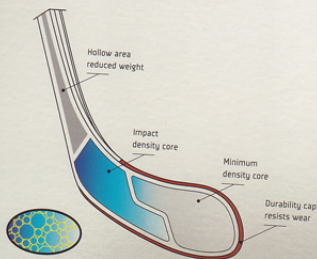

Aggressive dagger taper top line view accentuates the flex characteristics of the stick geometry. Dagger taper allows the hosel and blade area to increase flex and remain stable versus more traditional square or oval geometries in this region. Taper area and thin blade also give a visual impression of the puck being larger.

TRUE 1 TECHNOLOGY

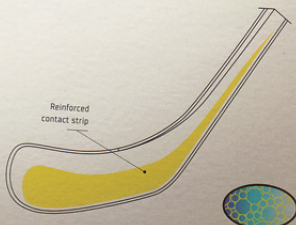

In a process first developed by Warrior engineers, True 1 construction describes the process of making a single-piece, fully molded shaft and blade. This process allows better control and dial-in for flex and weight balance of the stick since there is no fuse or connection joint of a shaft and blade.

D-LITE BLADE CONSTRUCTION

Using a double-density internal polymer core, D-Lite technology allows for a very stable heel and base area which transitions to a very light and springy mid-toe area. The center of gravity of the blade is also moved closer to the heel area, which makes the blade feel lighter but does not affect stability at impact. Taper hosel area is hollow, allowing for more weight savings. Additional aramid internal blade cap helps impact durability and prolongs blade life.

Reinforced contact strip increases impact durability from pucks and shots. Contact strip also helps to stiffen front face of blade, allowing for increased snap on shots and a very fast and responsive blade feel on wrist shots.

STICK TECHNOLOGY

MULTI-BIAS FIBER

New shaft design using multilateral and omnidirectional fiber placement to reinforce the shaft internally and protect it from cracking or fatigue. Continuous fibers create a network of carbon strands that help resist slash or puck impact.

PRECISION TAPER

A lower tapered section focuses energy into the bottom quadrant of the stick. This concentration of flex eases load and release. Easier load and better power transfer lead to harder and faster wrist and slap shots for the player who needs help loading the stick.

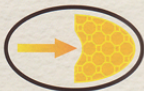

FUSED ONE-PIECE CONSTRUCTION

Molded stick in two separate processes where shaft and blade are fused by heat and pressure in lower area of stick. This connection process leads to consistent flex and increased torsional strength.

LINEAR TAPER

Shafts made with Warrior's exclusive Linear Taper design feature a longer and smoother flex reaction. It allows a larger area of the stick to bend rather than concentrating the energy into the bottom of the stick only, creating a very long flex arc. This flex arc increases accuracy and predictability on shaft load and provides the utmost in balanced energy transfer into the puck, benefiting players with heavy shots looking for more accuracy.

SOFT-CORE BLADE

The internal backbone of this blade is a semi-rigid polyurethane that absorbs vibration and helps settle the puck on the blade for better feel. The full-composite construction frame remains highly durable and responsive during puck-handling as well as receiving passes.

DOUBLE-D BLADE CORE

This combination of two polymers in the blade adds strength where you need it and cuts weight where you don't. High-density foam is used in the heel to provide max velocity and durability by increasing the blade center of gravity. Low-density foam is used in the toe to reduce weight and soften feel. This combination of double densities decreases blade torque at contact.

NIPPLE GRIP FINISH

Improved grip nipples are firmer for increased tactile grip on the hands. Less hand slip provides better stick-handling control and improved power transfer into the stick on large load shots. Raised nipples also avoid shaft torque, improving shot accuracy and consistency.

CLEAR GRIP

Clear Grip is exactly that, a clear finish that doesn't get between you and your shaft. Allowing the most slip and slide for your money, this is for the dangler who wants lightning-fast hand movement on the stick.

CRUSHED VELVET FINISH

This finish lowers the degree of hand grip from Soft Grip, but also allows for a separate hand feel on the shaft. Crushed Velvet is perfect for the player who would like a feel between Clear and Soft Grip with just enough tension and a nice soft finish up and down the shaft.

SOFT GRIP FINISH

Soft Grip finish provides a smooth grip on the shaft, reducing the tendency of slip during stick-handling and shooting, but allowing up-and-down stroke movement along the shaft.

STICK CONSTRUCTION TECHNOLOGY

X-STITCH

Based on Carbon Elite construction, Warrior engineers pushed the envelope to add extra durability and strength for higher performance without adding weight. This proprietary blend of an aramid stitch helps improve torsional strength as well as impact resistance.

CARBON ELITE

Warrior's proprietary elite construction package is the ultimate combination of light weight and power. High-modulus, low-weight aerospace-grade laminate provides strength under extreme flex, and the most efficient energy transfer.

CARBON DELUXE

A lightweight blend of carbon and composite fiber that boosts durability without sacrificing feel. The composite elite package provides increased elasticity with vibration resonance dampening for improved feel.

COMPOSITE DELUXE

Engineered layered composite construction provides the best flex characteristics within a durable package. High-pressure two-way shaft molding ensures a solid, durable construction.

Features

- True 1 process ensures the most consistent and responsive stick construction on the market, without artificial joints or weak points
- Dagger Taper Technology features an aggressive 12-inch taper from hosel to shaft for increased lower flex on all shots
- Multi-Bias fiber placement to reinforce internal shaft structure and improve impact durability
- Carbon Elite construction uses the highest-quality lightweight carbon-fiber pre-preg materials
- Pro-Balance blade and handle design for improved stick feel and weight distribution
- Additional three-inch stick length to avoid use of heavy extensions and end plugs
- D-Lite blade core features stable heel with super-lightweight toe for improved balance and puck control
- X-Stitch blade wrap carbon/aramid mix for increased durability and power transfer
- Nipple Grip coating
- 420 grams

Multi-Bias

Carbon Elite

X-Stitch

Caractéristiques

- Véritable construction monopiece permettant la construction de bâton le plus sensible et constant sur le marché, sans joints artificiels ou points faibles
- Technologie de fuselage Dagger permettant un fuselage de 12 po. du col au manche pour une hausse de flexion
- Technologie D-LITE offrant un talon stable et une palette ultra-léger pour un maniement de rondelle amélioré
- Manche recouvert d'une combinaison de XStitch Carbone - Aramide offrant plus de durabilité et transfert de puissance

PANTS

SIX-PACK PROTECTION

Increased flap protection from pants to shoulder pad ensures optimum gap coverage in very vulnerable areas.

FORWARD CANTED DESIGN

Pants are tailored and cut to follow the shape of a player's natural skating posture. The forward-canted design allows the pants to move with the skater and provide an ultimate level of protection.

SPINETEK

Independent back pad stays close to the lower back in skating position. Back pad is reinforced with ribbed plastic and high-density foams along with low-density impact foam for optimum coverage and comfort.

ENGINEERED LEG ZIPPERS

Gives pants fit versatility with leg openings for sliding over skates and/or a wider skating gate. Stretch gussets allow for full leg extension without compromising coverage.

PANTS CONSTRUCTION

A mix of durable flexing materials helps the pants move with the skater. The pants maintain cool airflow and resistance to the constant wear and tear of a full-contact game.

PROTECTIVE

EVO JACKET MOBILITY

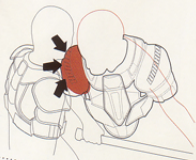

Shoulder pad protection that moves with you. The fitted, flexing internal jacket is designed for maximized mobility and ultimate protection. As the player shifts and twists on the ice, the internal jacket retains the full protective coverage in the event of contact.

----- LAST YEAR'S CAPS
 ——— CAP SIZE CHANGE
 ➔ CAP POSITION CHANGE

EVO SHOULDER CAP SIZE AND POSITION

Completely redesigned for 2011. The shoulder cap dimensions still providing complete coverage. The cap has also been repositioned slightly forward to the leading edge of the shoulder, giving the player more protection in body-contact situations. Evo pads are 10–20% lighter.

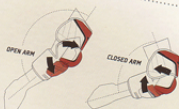

TWO-WAY PROTECTION COLLISION CAPS

Warrior's two-way protection system enables checkers and big contact players to deliver blows that remove their opponents from the play, but not from the game. All levels of hockey are now concerned with maintaining the spirit of the series and looking out for its competitors. Warrior protective EVO and SPEED caps have a layer of low-density foam fused to the cap's exterior. This foam diffuses stinging blows that contact the face and head, but still allows for natural body-contact energy transfer.

ANATOMICALLY SHAPED SHINS

Shape that follows the leg's natural curvature. The pad maintains great fit and contact, allowing for clean skating strides and full protection.

THREE-PIECE PROTECTIVE SYSTEM

Three independent sections hinge as the arm opens and closes for a complete range of motion and uncompromised coverage.

SHIN PAD AIRFLOW

Dry = Cool = Light. Vent openings in the shin and knee caps allow air to flow through the trampoline liner for the ultimate in air circulation.

HYPERLOCK EXTENSION PROTECTION

Shin pads with limitless flexion and a locking mechanism to eliminate hyperextension. Hyperlock will not allow the knee to bend forward and cause injury.

EVO ELBOW LOCKS

Four low-density foam pads fill negative space between the angles of your elbow, forearm and the pad to lock the gear in place.

FRANCHISE

Shoulder

Features

- Pro-level protection with a multilayered floating coverage system for added mobility
- Two-way protective newly shaped shoulder caps for key coverage and mobility
- Adjustable two-piece bicep protection
- Independent floating Bone System plexus and spine protection
- Lower-back Spinetek protection for impact dispersion
- Segmented high-density foam collarbone protection
- Silver Shield lining wicks moisture and controls odor
- Two-Timer main adjustment straps provide unparalleled fit variations
- Removable mid-body and lower-back pad flaps
- 10% lighter than 2010 Hustler pad

Caractéristiques

- Protection de niveau professionnelle et mobilité ultime grâce aux zones de protection multicouches flottantes pour une mobilité accrue
- Construction d'épaulettes à double sens pour une couverture et une mobilité accrue
- Protection de sternum et de colonne flottante comprenant le système de protection Bone System
- Protection du bas du dos Spinetek offrant une dispersion d'impacts
