HOCKEY 2002 INTRODUCTION

HOCKEY 2002

EASTON HOCKEY 2002 product catalog

[Dedicated to the sport of Hockey for over 20 years]

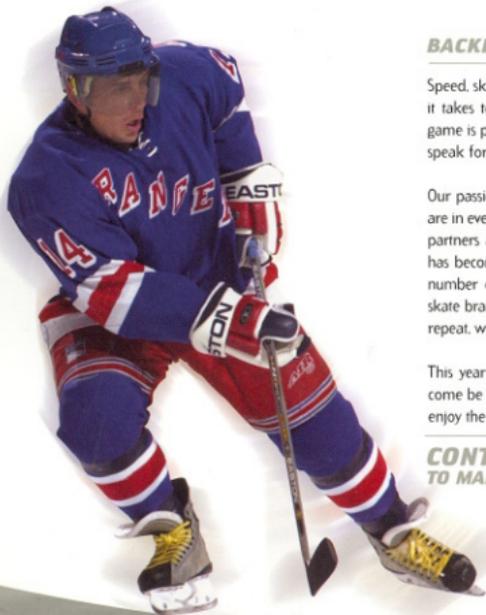

BACKED BY THE BEST NAMES IN HOCKEY

Speed, skill, finesse, toughness, focus and teamwork. That's what it takes to have a winning team that can change the way the game is played. At Easton, we live this philosophy, and the results speak for themselves.

Our passion and commitment to performance, value and safety are in every little detail of our product. In conjunction with all our partners around the world, from retail to professionals, Easton has become the strongest team in the game. Today we are the number one stick, number one glove, and the fastest growing skate brand in the NHL. For 2002, our goal is nothing short of a repeat, with the most exciting product line we have ever offered.

This year we welcome back our partners and invite others to come be a part of the hottest brand in hockey. Come join us and enjoy the benefits. Come change the way the game is played.

CONTINUING OUR COMMITMENT TO MAKING THE BEST EQUIPMENT POSSIBLE

non-slip wicking
footbed

with stainless steel
runners

EASTON
PARABOLIC STAINLESS STEEL

THE IDEAL FIT SYSTEM

Easton's exclusive skate fitting system.

A system of our ankle pads, lasts, quarter package and tongue that fills all the negative space surrounding the foot to create a fit like a second skin. Heat moldable or ready to wear out of the box.

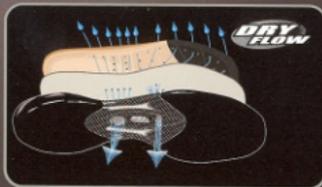

UNI-BODY

Uni-Body™ Shaped as a unit rather than separate parts. This construction method is more consistent than any other. Lasted twice to create a composite structure of the entire skate: each part works together to make a single unit of strength, durability and consistency.

RAZOR BLADZ

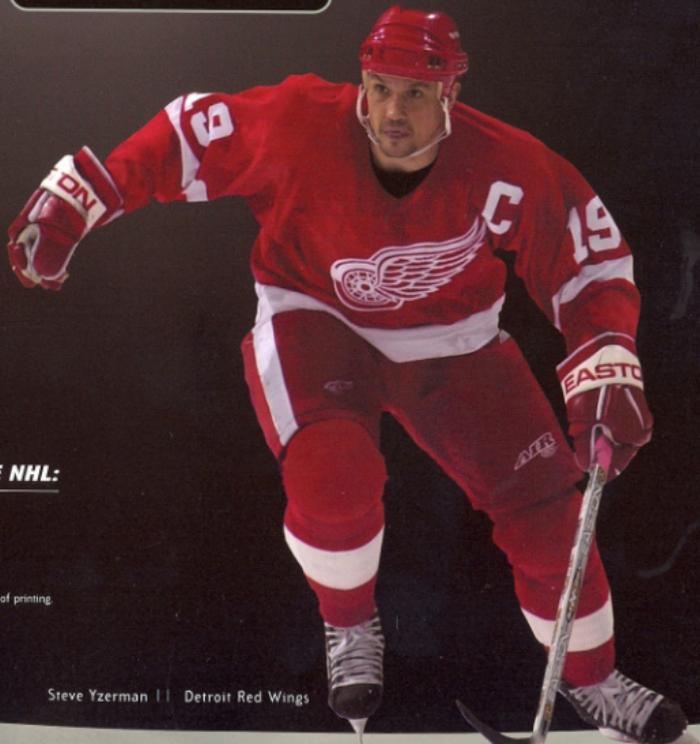

By creating a space between the holder and the stainless runner, the steel is able to flex in a perfect arc during turns for a sharper radius and dig deeper into the ice during starts and stops for better grip.

THE DRY FLOW SYSTEM

THE FIRST PRODUCTION SKATE BOOT DRAINAGE SYSTEM.

Easton skates with Dry Flow™ releases the moisture and excess heat created during play, so they stay lighter, stiffer and dryer game after game.

EASTON, THE FASTEST GROWING SKATE BRAND IN THE NHL:

Detroit - 4	Philadelphia - 1	Los Angeles - 2	Montreal - 1
Minnesota - 1	NY R - 6	San Jose - 2	Washington - 2

EASTON

Z-AIR

Skat: **A14702** Sizes/Poignures: 6-12.5 (full & half) D. EE

Features:

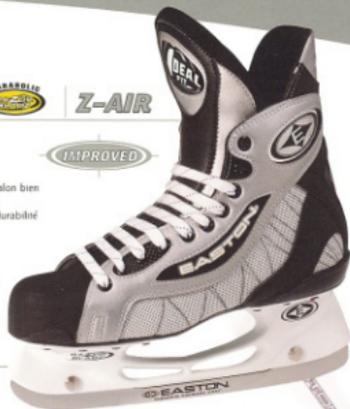

Comfort

- Ergonomic ankle padding system comfortably secures heel
 - Ideal fit tongue with ergonomic sidecut design
 - Two piece, Nash®/suede lining for a combination of comfort, durability and moisture resistance
- Performance**
- Lightweight, contoured carbon heel reinforcement
 - ETC™ anti-microbial non-slip wicking footbed
 - Low profile outsole with carbon insert minimizes torque and maximizes turning radius
 - Carbon heel reinforcement
 - Waxed laces for decreased stretch and a secure fit

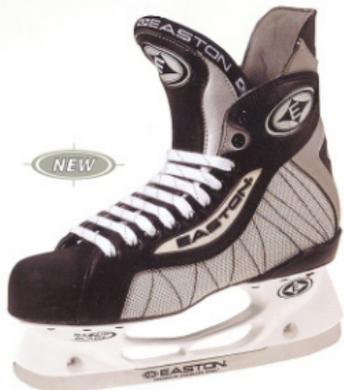

Features:

Comfort

- Le système de rembourrage ergonomique des chevilles fixe le talon bien en place
 - La doublure deux pièces en Nash®/suede assure le confort, la durabilité et la résistance à l'humidité
 - Modèle de languette à arc latéral ergonomique
- Performance**
- Renfort du talon en carbone léger et profilé
 - Semelle en tissu mèche antidérapante et antimicrobienne ETC™
 - La semelle extérieure à profil surbaissé avec pièce insérée en carbone réduit au minimum le torsion et maximise le rayon de virage
 - Lacs cirés procurant moins d'éxtensibilité et un meilleur ajustement solide

NEW

AIR

Skat: **A14702** Sizes/Poignures: Sr: 6-12.5 (full & half) D. EE / Jr: 3-5.5 (full & half) D. EE

Features:

Comfort

- Low profile outsole maximizes turning radius
- Clarino™ lining for a combination of comfort, durability and moisture resistance

Performance

- ETC™ anti-microbial non-slip wicking footbed
- Low profile outsole maximizes turning radius
- Waxed laces for decreased stretch and a secure fit

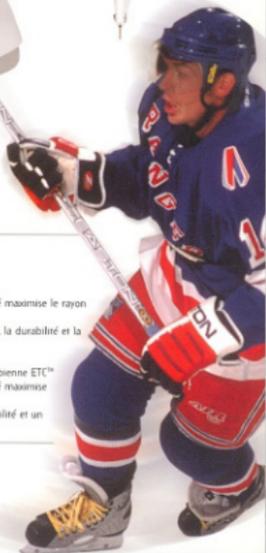

Features:

Comfort

- La semelle extérieure à profil surbaissé maximise le rayon de virage
- La doublure Clarino™ assure le confort, la durabilité et la résistance à l'humidité

Performance

- Semelle en antidérapante et antimicrobienne ETC™
- La semelle extérieure à profil surbaissé maximise le rayon de virage
- Lacs cirés procurant moins d'éxtensibilité et un meilleur ajustement solide

ULTRA LITE PRO

Skis: A147702 Sizes/Pontures: Sr. 6-12.5 (full & half) D. EE / Jr. 3-5.5 (full & half) D. EE

Features:

Comfort

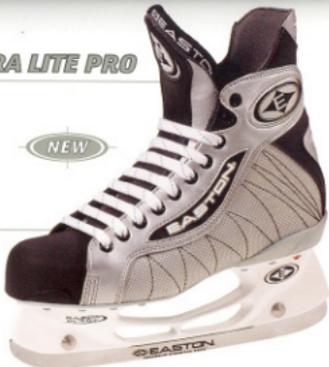

- 70/30 Microfibre/Cambrelle™ lining for a combination of durability and comfort
- Performance
- Ultraskin™ slash resistant woven PU quarters
- Low profile outsole maximizes turning radius

Features:

Comfort

- Double à 70/30 microfibre/Cambrelle™ pour la durabilité et le confort
- Performance
- Quartiers en Ultraskin™ résistant aux coupures
- La semelle extérieure à profil surbaissé maximise le rayon de virage

NEW

ULTRA LITE

Skis: A147702 Sizes/Pontures: Sr. 6-12.5 (full & half) D. EE / Jr. 1-5.5 (full & half) D / Yn. 10-13 (full only) D

Features:

Comfort

- Pre-formed, anatomical ankle insert to minimize break in period
- Ergonomic sidecut tongue design
- 70/30 Microfibre/Cambrelle™ lining for a combination of durability and comfort

Performance

- Low profile outsole maximizes turning radius
- Lightweight, durable ballistic nylon quarters

Features:

Comfort

- Chevilles anatomiques préformées aux chevilles pour réduire la période d'adaptation au minimum
- Modèle de languette à arc latéral ergonomique
- Double à 70/30 microfibre/Cambrelle™ pour la durabilité et le confort

Performance

- La semelle extérieure à profil surbaissé maximise le rayon de virage
- Quartiers en nylon balistique durable et léger

NEW

Skis: A147002 Sizes/Pontures: Sr. 6-12 (full only) D. EE / Jr. 1-5 (full only) D

Features:

Comfort

- Pre-formed, anatomical ankle insert to minimize break in period
- Moisture wicking Cambrelle™ lining ensures comfort and durability
- Performance
- Durable PU quarters
- Easton injected blade holder with carbon steel

Features:

Comfort

- Chevilles anatomiques préformées pour réduire la période d'adaptation au minimum
- La doublure en tissu métré contre l'humidité Cambrelle™ assure le confort et la durabilité

Performance

- Quartiers PU durables
- Porte-lames Easton injecté d'acier au carbone

Z-CARBON
THE NEXT GENERATION HAS ARRIVED

EASTON HYBRID WOOD STICKS ARE LIGHTER, STRONGER, AND THE PRECISION MOLDED BLADE IS MORE CONSISTENT. STICK AFTER STICK AFTER STICK.

Easton's unique fusion of carbon to wood for the best of all worlds

Multi-core high pressure laminates

2002 Easton Wood Sticks manufactured with Easton Fusion Technology fuses the most traditional aspects of the sport - a wooden shaft - with its most sought after technical enhancement - the Carbon Composite Blade.

[110, 100, 95] - Senior

Z-CARBON 110 HYBRID

Shaft imported from Finland. 8 strips of structural carbon oriented to resist shaft torque. High Pressure exterior Glass Armour Laminates. 3 Piece Kiln Dried Aspen Core.

Z-CARBON 100 HYBRID

Shaft imported from Finland. 4 strips of structural carbon oriented to resist shaft torque. Exterior birch veneer laminate. 3 Piece Kiln Dried Aspen Core.

Z-CARBON 95 HYBRID

Shaft imported from Finland. High Pressure Exterior Glass Armour Laminates. 3 Piece Kiln Dried Aspen Core.

[70] - Intermediate

Z-CARBON 70 HYBRID

Imported shaft from Europe in the perfect dimensions for the Intermediate player. Kiln dried Aspen core sandwiched in High-Pressure laminates for response and stiffness.

[65.50] - Junior

Z-CARBON 65 HYBRID

The premier junior performance construction. Carbon reinforced glass laminates provide unmatched consistency, stiffness and performance in a junior stick. Shaft

on compression molded carbon produces the same shape and curve after blade after blade.

Carbon paddle construction

Precision molded carbon blade

EASTON HYBRID TECHNOLOGY Patent Pending

(A) **BOTTOM LAYER**

Specialized internal expanded foam core system. Extremely light weight feel enhancing "T" Beam geometry.

(B) **AEROSPACE CARBON GRAPHITE - ORIENTATION 1**

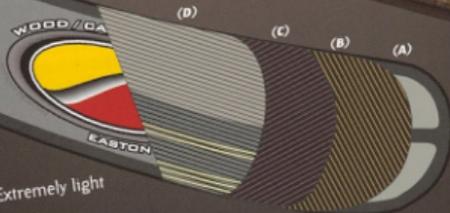

Resists blade torque and keeps the blade true to the target line.

(C) **AEROSPACE CARBON GRAPHITE - ORIENTATION 2**

Blade Stiffening System: allows for a longer, lighter blade without a sacrifice in stiffness.

(D) **GLASS/CARBON/ARAMID SOCK**

Increases the degree of contact between the blade and the puck.
Adds an additional level of wear resistance on high impact surfaces.

Mike Modano | Dallas Stars

 EAST

Z-CARBON 110

SKU: A11S195 Zzerman / A11S197 Modano / A11S196 Shanahan / A11S195 Drury

Features:

- Carbon paddle construction
- 4x4 carbon reinforced glass laminate
- Carbon/Aramid reinforced sock
- 110 XX Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre renforcé au carbone 4x4
- Flexion rigide 110 XX

Z-CARBON 100

SKU: A11S192 Zzerman / A11S191 Modano / A11S193 Shanahan / A11S194 Drury

Features:

- Carbon paddle construction
- 2x2 carbon reinforced glass laminate
- Birch veneer
- Carbon/Aramid reinforced sock
- 100 Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre renforcé au carbone 2x2
- Placage en bouleau
- Flexion rigide 100

Z-CARBON 95

SKU: A11S187 Zzerman / A11S189 Modano / A11S188 Shanahan / A11S190 Drury

Features:

- Carbon paddle construction
- Glass laminate
- 95 M Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre
- Flexion rigide 95 M

Z-CARBON 70 INTERMEDIATE

Skis: A11S200 Yzerman / A11S201 Modano

Features:

- Carbon paddle construction
- Glass laminate
- New performance intermediate shaft dimension
- 70 M Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre
- Nouveau manche intermédiaire de haute performance
- Flexion rigide 70 M

NEW

JR. Z-CARBON 65

Skis: A11S202 Yzerman / A11S203 Modano

Features:

- 2x2 carbon reinforced glass laminate
- Carbon paddle construction
- Carbon/Aramid reinforced sock
- 65 Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre renforcé au carbone 2x2
- Flexion rigide 65

NEW

JR. Z-CARBON 50

Skis: A11S204 Yzerman / A11S205 Modano

Features:

- Carbon paddle construction
- Glass laminate
- 50 M Stiff Flex

Features:

- Fabrication de la palette en carbone
- Manche stratifié-verre
- Flexion rigide 50 M

NEW

ULTRA FIBRE

Available In Canada Only/Disponible au Canada seulement

Skis: A118155 Sakic / A118157 Modano / A118154 Lidstrom / A118156 Shanahan

Features:

- Glass molded construction
- Dynamic 10.5" taper
- 95 M Stiff Flex

Features:

- Fabrication moulée en verre
- Finition dynamique de 26.6 cm (10.5 po)
- Flexion rigide 95 M

CLASSIC

Skis: A118160 Yzerman / A118163 Sakic / A118161 Modano / A118162 Shanahan

Features:

- Aircraft veneer construction
- 19 ply laminate
- 5 mm corner radius
- 95 M Stiff Flex

Features:

- Fabrication en placage d'avion
- Stratiifié à 19 couches
- Rayon de coin de 5 mm
- Flexion rigide 95 M

CLASSIC INTERMEDIATE

Skis: A118183 Yzerman / A118184 Modano

Features:

- Aircraft veneer construction
- 19 ply laminate
- 5 mm corner radius
- 70 M Stiff Flex

Features:

- Fabrication en placage d'avion
- Stratiifié à 19 couches
- Rayon de coin de 5 mm
- Flexion rigide 70 M

JR. YOUTH CLASSIC

Skis: A118180 Yzerman / A118178 Shanahan / A118179 Modano / A118186 Yzerman Youth

Features:

- 13 ply laminate
- Micro radius
- 60 Stiff Flex Jr./ 50 M Stiff Flex Youth

Features:

- Stratiifié à 13 couches
- Micro rayon
- Flexion rigide 60 Junior / Flexion rigide 50 M Jeunes

Z-ABS/JR. Z-ABS

SKU: A118119 Yzerman / A118118 Yzerman Jr.

Features:

- Glass molded Sr./ 13 ply laminate Jr.
- In-mold texture (Sr. only)
- Dynamic taper
- 100 Stiff Flex Sr./ 60 Stiff Flex Jr.
- Moulé en verre Senior / stratifié à 13 couches Junior
- Texture au moulage (Senior seulement)
- Fûtéau dynamique
- Flexion rigide 100 Senior / Flexion rigide 60 Junior

ULTRA ABS/JR. YTH ULTRA ABS

SKU: A118121 Shanahan / A118122 Shanahan Jr. / A118145 Shanahan Youth

Features:

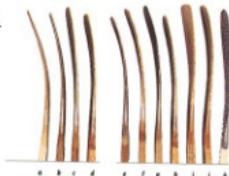

- 14 ply laminate
- ABS/Fiber paddle
- 80 M Stiff Flex Sr./ 50 Flex Stiff Flex Jr./ 40 M Stiff Flex Youth
- Stratifié à 14 couches
- Palette ABS/fibre
- Flexion rigide 80 M Senior/Flexion rigide 50 Junior/Flexion rigide 40 M Jeunes

EASTON

HOCKEY 2002 COMPOSITES

Featured
Z-BUBBLE

EASTON COMPOSITES ARE THE NO. 1 HOCKEY STICKS IN THE NHL

55.2% of NHL players use Easton composite sticks
as time of printing

NEW

Proprietary metal-matrix weave provides unmatched weight to strength ratio, impact dispersion, and superior cut resistance available in composite hockey sticks today.

Easton Composite hockey shafts offer today's player the ability to perform at his/her highest level by providing:

- Freedom of blade choice
- Compression molded performance
- Cutting edge aerospace materials
- A wide variety of shaft dimensions, surface textures and performance flexes

Options in shaft profiles:

Brett Hull | Detroit Red Wings

Compression Molding for a high end performance product which produces highly consistent dimensional and product control

Aramid/Graphite construction

Reduced shaft torque for improved accuracy

Proprietary Parabolic Focus Flex™ zone – geometrically engineered to target the optimal release point in a tightly defined region of the shaft for the widest options and most impressive results

Hydrophobic, textured GRIP coating for better control

Z-BUBBLE GRIP

SYNERGY Synergy Grip and Synergy

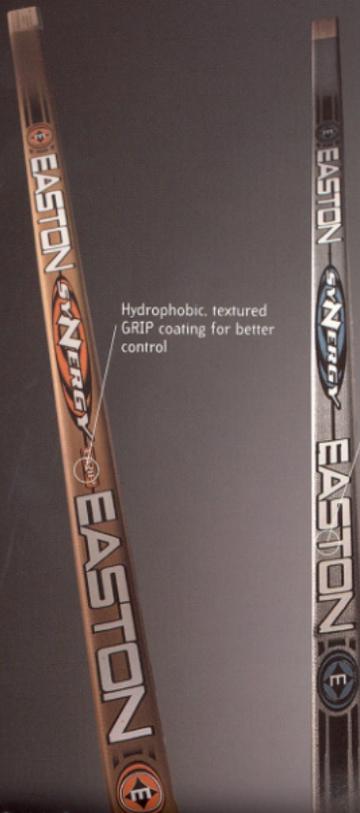

THE NO. 1 HOCKEY STICK USED IN THE NHL

177 players or 27.61% of the league choose Synergy to win games, at time of printing.

YOUR GAME HAS ARRIVED

Unmatched Materials. Unmatched Manufacturing Processes. Unmatched Engineering Design.

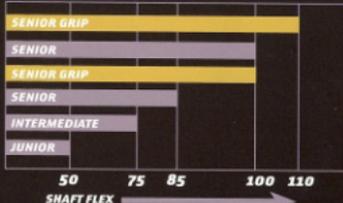

Easton has refined its Taper Flex Technology, introduced in 1989, to produce the most consistent stick ever to hit the ice. Precision molded blade, dynamic compression molded shaft delivered in six different flexes, three geometries and two shaft textures.

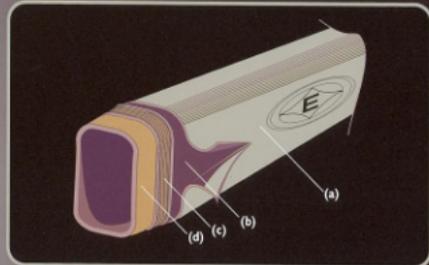

Hydrophobic, textured GRIP coating for better control

Proprietary Aramid/Graphite manufacturing process

THE PROPER FLEX FOR OPTIMAL PERFORMANCE

EASTON SHAFT TECHNOLOGY

(a) Woven Aramid exterior for improved impact protection.

(b) Very low Fibre Aerial Weight carbon layers allows for nearly twice the carbon density of lightweight structural materials.

Taper Flex technology -
geometrically engineered
to direct the flex point to
the tip of the shaft for a
dynamic tip response and
ultra low release point

Lowest engineered kickpoint
of any stick in the market

Z-Carbon™, pro-stiff blade construction

WEIGHING THE DIFFERENCE

Synergy is available in 6 patterns

(b) Very low Fibre Aerial Weight carbon layers allows for nearly twice the carbon density of lightweight structural materials.

(c) Strategically oriented Aerospace grade carbon optimize both feel and response.

(d) Inner layer orientation provide for very specific flex characteristics of the shafts.

EASTON SKATE FEATURES

Easton's unique skate fitting philosophy fill all the negative space surrounding the foot, locking it in with unparalleled comfort. The system combines a thermally activated composite construction, an air-foamed latex ankle pad, side toe tongue, and Easton's proprietary lasts. The heat moldable Ideal Fit system - fits and feels like a second skin.

Easton's proprietary skate construction philosophy assemble the entire skate and then shape it as a unit rather than in separate parts, ensuring a higher level of consistency skate after skate. We send our skates through a secondary lasing procedure that allows us to make the entire skate a composite structure: all the components supporting each other. Durable, consistent and single unit integrity makes this the construction method of the future.

Proprietary skate stability system. Easton skate designers have created an energy transfer enhancement that maintains the optimal connection between the foot and the skate by locking the forefoot into place. The exclusive Padlock system generates a more powerful skating stride.

The first production skate boot drainage system. Easton has developed a system, which releases the moisture and excess heat created during play. Easton skates with Dry Flow™ will stay lighter, stiffer and drier from the opening lacesoff to the final buzzer game after game.

Anatomically correct, angled tongue design remains perpendicular to the shin and stops the tongue from twisting during each stride. Better timing, better performance, unsurpassed comfort.

Easton Parabolic Razer Blade Logostranger, faster sharper. A revolutionary blade system which allows the steel to arc during turns. Energy return. Faster, sharper, explosive turns. Advantage: Acceleration. Exclusive.

EASTON PROTECTIVE BREAKDOWN

Easton's ultimate protective combination. Defused by its lightweight, protective, and moldable Expanded Polypropylene (EPP) foam. This technology produces extremely light ergonomic protective components with unsurpassed shock absorbing properties. Zero Shock eliminates the need for bulky plastics and foams. Strategically located in key impact areas, it's specifically engineered to increase mobility while protecting you from the big hit.

Staying cool under pressure is an attribute top players around the world call upon. Vent Air puts this attribute to practical application. The Vent Air logo will identify products where air flow and heat transfer have been addressed in a meaningful fashion. Stay cooler... perform better.

Easton's newest air bladder design. 13% more efficient than foam, these lower profile, high shock absorption bladders fit closer to the body while maintaining superior protection. The exclusive center gel chamber effectively reduces high frequency vibrations that are common to hockey related impacts. Pressurized air never lets up.

Easton's patented air protection system that efficiently disperses the energy of an impact. At the point of impact, air is forced out from the center and around the outer chambers of the bladder. The result? Easton's air bladders keep the shock as far away from your body as possible.

Easton's commitment to freedom of movement. From three-piece their shoulder pads to three-piece elbow pads, Easton leads the industry in protective equipment that moves the way you move. Molded after the natural shapes and movements of the body, the only time you'll notice our equipment is when it absorbs the shock of your fall.

Patented thumb orientation and protection system. The Ergo thumb orientation matches the natural 45° angle the human thumb makes with the hand. Gloves feel more natural and more mobile. The player will experience better feel and mobility without a sacrifice in protection.

EASTON STICK TECHNOLOGIES

Balanced Performance. Consistent. Serious evaluation of the wood stick. The benefits of enhanced power, feel and balance with the unique fusion of carbon to wood. Precision molded carbon composite blade. Performance. Consistent. Multi-core, high pressure laminates. Lighter, stronger, better balance, better release.

Wood/Carbon Hybrid. As only Easton can, the highest quality natural and synthetic materials merged in one very impressive performance product. Better feel, better performance. Better results.

Easton's manufacturing process all chose for the high-end performance stick market. The process produces highly consistent dimensional and structural control.

Consistent. Durable. Dynamic. The calling cards of Easton designed and manufactured carbon and Kevlar® composite hockey blades. An Easton process exclusive with a tremendous NHL following.

Faster bending wood stick shaft technology. This technology increases the consistency of the wood shaft to produce a superior stick product. Feel the balance. Feel the response.

THE P.R.S. STICK SELECTION SYSTEM

PERFORMANCE

8.5

WEAR

8

WEIGHT 200 GRAMS

PIS

The Easton Performance Rating System is designed to aid retailers and consumers in choosing the right stick for their style of play. Using a scale of 1-10, the rating system allocates a performance and wear value to every shaft in the line, along with the respective weight of each model.

PERFORMANCE

This element of the system calls out the level of play each particular shaft was designed

EASTON SHAFT FLEX OPTIONS

Geometrically engineered to direct the flex point to the top of the shaft. The dynamic tip response and an ultra low release point have attracted NHL Stars for 15 years.

Geometrically engineered to target the optimal release point in a tightly defined region of the shaft. Focus Flex provides the widest options and impressive results for any aspiring sniper.

Targeted flex characteristics have long set Easton above the rest of the industry. Differential Flex directs the action of the shaft in response to the player's shot mechanics. Consistent shot load and release player after player.

This shaft loading profile is greatly dependent on the materials and load points placed on the shaft. The Flex profile is common to straight walled shafts and wood core stick products. It reflects the ground floor of shaft flex design.

For the Strength performance rating of 10 identifies the stick as an elite level product, whereas the E Flex's performance rating of 6 calls out the entry level design of the shaft.

WEAR

The wear factor calls out the projected durability of each shaft. This element was introduced to help avoid the dollar vs. durability misconception. The relatively inexpensive aluminum category focuses the wear rating of 9.5.
